SOLD BY THE GALLON,

And packed for shipment, in $\frac{1}{8}$, $\frac{1}{4}$, $\frac{1}{2}$, 1, 2, 3, 5, 10, 20 & 40 gallon packages.

L. P. 5.

HARRISONS'
READY MIXED PAINTS,

REQUIRING NO THINNING FOR USE.

THESE Paints are not new and untried; but have been successfully sold since 1869, since which time over 35,000 buildings have been painted with them. The inventor of the process by which they are prepared has been a practical painter, of large experience, and has only brought these paints to their present perfection after years of experiment and persistent chemical research into the nature of oils and pigments, in which he has been assisted by eminent and scientific men. They are not SOAP PAINTS, made with lime water or silicate of soda and caustic potash, the usual means employed to cause a thorough mixture of oil and water in nearly all the liquid paints sold, whereby the consumer buys soap instead of oil, and which have caused the proprietors of the "Town and Country Ready Mixed Paints" to deprecate the use of liquid paints heretofore so strongly. Seeing the great advantage to the farmer, the housekeeper and the artisan, who do not wish, or cannot afford to employ labor, this firm have finally concluded to prepare their Town and Country Paints in a form ready for immediate application. No wonderful properties are claimed for the "Town and Country Ready Mixed Paints;" they are simply prepared from Pure White Lead (corroded by the proprietors), Pure Oxide of Zinc, and the finest and strongest coloring material that is obtainable, mixed with Pure Linseed Oil, so prepared that it will never become fatty, or lose its property of combining with Lead or Zinc, thus always drying hard and glossy.

These Paints are not affected by changes of temperature, and will not crack, blister, peel or flake, and will always dry with the highest possible finish. They are warranted to stand under all exposures, and will form a perfectly waterproof covering, very elastic and beautiful. They will work freely under the brush, and may be applied by the most inexperienced persons if the directions are followed.

The "Town and Country Ready Mixed Paints" are manufactured by HARRISON BROS. & Co., on a licensed formula.

TDCAT 1875 PAPV 5630748B

QUANTITY REQUIRED FOR A BUILDING.

One gallon of "Town and Country Ready Mixed Paint" will cover, with two *good* coats, 200 to 250 square feet. To DETERMINE THE QUANTITY REQUIRED, take twice the sum of the length and breadth of a building, in feet, multiply that by the height, and divide by 200—the result will be the number of gallons required. To estimate the gable ends above the line of the eaves, multiply the width of the building by half the pitch of the roof.

NOTE PARTICULARLY THE

DIRECTIONS FOR USE.

In order to secure a rich, glossy surface, it is necessary to be guided by the following directions, as far as possible. Stir thoroughly before using. *Let the first coat get dry and hard before applying the second.* Apply with a *full* brush, smooth and evenly, without thinning. Care should be observed not to brush it out too much, as it is ground and mixed very finely, and works freely under the brush, and can be made to spread over a much larger surface than is intended, consequently not covering sufficiently. If at any time thinning should be desired, nothing but pure boiled oil should be used for outside work, and also for inside where the gloss is desirable. Turpentine may be used, also Benzine, but we do not recommend either as a thinner, if you wish to preserve the durability and the rich glossy surface of the paint. By the addition of Turpentine, a "flat" finish is obtained. To insure a perfect and uniform gloss finish, it is necessary to apply two coats.

NOTE.

To those who prefer to buy Colored Lead and Zinc, and thin to suit, the proprietors of the "Town and Country Ready Mixed Paints" offer the "TOWN AND COUNTRY PASTE PAINTS," ground the same as White Lead, through their agents and dealers generally. Sample cards furnished on application.

ADVANTAGES TO DEALERS

IN PURCHASING THE

Ready Thinned "Town and Country" Paints.

The proprietors of the "Town and Country" Ready Mixed Paints will send to any agent or dealer, who does not wish to carry a full line of these paints. A KEY, by which he may mix 28 tints from the 8 primitive colors, Nos. 60, 64, 68, 69, 72, 76, 80, 88, and White, thus keeping only 9 different numbers in stock. These paints are invaluable to the Druggist or Dealer who mixes paints, as they will save hours of valuable time.

THE NUMBER OF TINTS

is reduced to a minimum, by selecting only those that experience has shown to be in most frequent demand. The actual number of house colors is only eight. In them are two browns, a dark yellow, a bright yellow, an olive, a blue gray, a green gray, and a lilac. These may be reduced with white to twenty-one tints of the deep colors, giving shades and tones suitable for every position and every contrast which the location of the object to be painted may demand, or may be required by good taste or judgment. Besides these colors and tints, there are furnished for special objects, Nos. 84, 85, 86, 87, as shown on this circular, and PURE BLACK, INSIDE AND OUTSIDE WHITES, SCARLETS AND BRIGHT ORANGE, for wagons, farm implements, brick work, and all uses for which bright and strong colors may be wanted.
